The Evidence-Led Blueprint

A personal introduction for Anna and Haley before the chapters begin.

The opportunity begins with what is already real: the friendship, the hunt, the art, the questions, and the audience learning beside you. Watch this first. Then use the Atlas as the operating map.

[PLAY THE APPROVED VIDEO ►](#)

Hey, hoes!

Listen, ladies: you have a good thing going here. A genuinely good thing—not the kind people invent in a conference room after three hours of saying “brand identity” until everyone wants to leave.

You already have the ingredients people spend years trying to manufacture: a real friendship, an unusual shared obsession, the thrill of the hunt, the surprise of the find, the satisfaction of making art, and two personalities an audience can follow. *BonesAndHoes* does not need a fake business persona wrapped around it. The story is already happening.

This Atlas exists to help you recognize what you have, put it to work, and build a business around the parts you actually enjoy. The point is not to turn every outing into a sales pitch. The point is to notice that every hunt, discovery, preparation problem, design decision, product choice, failure, finished piece, and ridiculous conversation between you already contains content, market research, and a path to revenue.

**“Your friendship is
the unfair
advantage.”**

People are not only watching two artists complete projects. They are following the reactions, disagreements, experiments, running jokes, victories, and occasional “well, that was a terrible idea” moments you experience together. A product catalog cannot manufacture that chemistry. Please do not try to make it look polished into submission.

That chemistry also opens the door to a much larger circle: artists, collectors, vendors, suppliers, educators, event organizers, and creators who live somewhere in this strange and wonderful ecosystem. Some will become interviews or collaborations. Some will become trusted sources and business partners. A few may become lifelong friends. Every real relationship can introduce a new idea, a new audience, or a new branch of the business.

The hunt starts the story. The find creates curiosity. Preparation teaches something useful. Choosing the substrate, mount, stand, enclosure, finish, or tool reveals what people need. Making the art creates the journey. The finished piece delivers the payoff. One project can produce an entire stream of content while naturally showing the audience what you used, where you found it, what worked, what failed, and how they can make something of their own.

And there is the money. The finished art earns attention, but the repeatable commercial opportunity often sits around it: preparation products, substrates, mounts, rods, stands, bases, enclosures, finishes, lighting, packing supplies, education, and trustworthy guidance. BonesAndHoes can become the place that connects those pieces—earning through digital resources, affiliate recommendations, curated shopping paths, partnerships, and, once demand has proven itself, products of your own.

No warehouse.

No heroic inventory order. No spending a pile of money to discover that twelve people wanted the thing and eleven were being polite. Start with real projects. Let the content expose demand. Follow the strongest signals. Build only what earns the right to exist.

This is how..

CHAPTER 1

One Project, Many Paychecks

The business begins with one real project—not a storefront, not a pallet of merchandise, and definitely not a logo redesign emergency.

Imagine finding a vintage glass-front cabinet at a thrift store. The cabinet is one of a kind, but the value surrounding it is repeatable.

The hunt becomes a short video. The discovery becomes a story. Cleaning and repair become education. Interior choices create a design comparison. Measurements become a compatibility lesson. The mounting problem reveals tools and hardware. The finished cabinet creates the reveal.

The questions afterward tell you what the audience needs next. The cabinet may never be sold. Everything learned around it can still create value.

That is the BonesAndHoes engine:

**Find it. Document it.
Make it. Teach it.
Link it. Learn from
the response. Then do
it again—smarter.**

Every project should produce four assets at once:

This is not wishful thinking.

- 50** The research has already identified more than 50 concrete product and pricing observations,
- 25** at least 25 supplier or partner records,
- 18** developed content-series concepts,
- 61** curated networking targets, and an Expo census with 58 records, including 48 verified current vendors.
- 58** The raw material is sitting on the table. Your job is to connect it to actual
- 48** projects so it becomes useful.

That connection is difficult to copy. Anybody can dump product links onto a page.

A trusted record of what fit, what failed, what shipped safely, what came from where, which creator contributed the idea, and what the audience did afterward? That becomes an asset.

For every project, record the outcome, source, measurements, products, suppliers, creative choices, contributors, failures, questions, clicks, purchases, and returns. Over time, those records become a project-intelligence system. Every project makes the next recommendation smarter, the next guide stronger, and the next product decision less likely to be expensive nonsense..

CHAPTER 2 Give the Audience Somewhere to Go

Attention without a destination is just a nice little dopamine event. BonesAndHoes needs an owned home from the beginning.

Launch a simple, mobile-first website under the BonesAndHoes domain. It does not need to be an expensive store on Day One. It needs to make the next step obvious.

The first site should include:

Start Here: what BonesAndHoes is and where a new visitor begins;

Projects: complete hunt-to-finished-art stories;

Shop the Project: exact supplies, alternatives, fit notes, and links;

Free Resources: genuinely useful tools that earn email signups;

Digital Guides: paid resources delivered through Payhip;

Featured Creators: credited interviews, spotlights, and collaborations;

Community Hub: project help, sourcing knowledge, techniques, product experience, and collaboration;

Legal Navigation: the free 50-state starting guide and deeper resources;

About Anna and Haley: the friendship and point of view behind the work..

Every social profile should lead into this owned system. Do not send someone who watched the cabinet project to a generic homepage and make her conduct an archaeological dig for the products. Send her to the cabinet page.

The path is:

Each platform has a job:

TikTok creates fast discovery, personality, response videos, and creator-affiliate opportunities.

TikTok, Instagram, YouTube, YouTube Shorts, or Pinterest →

→ exact project page

Instagram carries Reels, visual carousels, Stories, creator features, and the daily relationship with the community.

YouTube holds long-form project stories, searchable education, interviews, and Expo coverage that can work for years.

Community Hub, free resource, or email signup →

YouTube Shorts distributes the strongest moments from the longer story.

Pinterest gives finished projects, sourcing ideas, displays, and project pages an evergreen discovery route.

→ paid guide, affiliate product, Etsy listing, or TikTok Shop product →

→ later owned product

Email turns borrowed attention into a relationship you control.

The website connects the entire journey and makes it useful, searchable, and shoppable.

Do not post one identical file everywhere and call it a strategy. Keep the core idea; adapt the hook, edit, caption, and call to action to the culture of each platform. Same project, different doorway..

CHAPTER 3

Stop Asking What to Post

THE CONTENT ENGINE

From Single Project to Multi-Channel System & Data Intelligence

Do not wake up every morning and stare at a blank screen wondering what the algorithm desires from you today. Document the work you are already doing, then cut that work into useful stories.

Every substantial project should create:

- one 10–25 minute YouTube episode covering the hunt, preparation, design, problems, art-making, and reveal;
- eight to fifteen TikToks, Instagram Reels, and YouTube Shorts;
- two Instagram or Pinterest carousels;
- Stories with polls, questions, and in-process decisions;
- one shoppable project page;
- one email;
- one free or paid resource update;
- one product comparison;
- one honest failure or lesson;
- one creator, vendor, or supplier feature.

The long-form YouTube episode is the pillar. It gives the project room to breathe and lets your your friendship carry the story. The short pieces pull out the moments people cannot resist: strange discovery, the design disagreement, the mistake, the tool that unexpectedly saved the day, the satisfying transformation, or the question the audience has opinions about. And they will have opinions. The internet has never lacked those.

The Tool That Earned Its Place: a recommendation backed by actual use.

The Failed Display File: what went wrong and how others can avoid it.

Make It, Price It, Pack It: the creative result connected to selling and shipping.

Every YouTube description and project page should contain the full pathway: creator and vendor credits, products used, budget and premium alternatives, compatibility notes, affiliate disclosures, the relevant free guide, the paid resource, Etsy or TikTok Shop links where appropriate, and an email signup.

If a viewer is interested enough to ask, do not make her hunt for the answer in seven comment threads.

Use recurring formats so viewers recognize the kind of fun they are joining:

FOUND, CHOSEN, MADE: discovery, design decisions, and the finished result.

ONE FIND, THREE DIRECTIONS: three creative possibilities from one object.

TREASURE ROUTES: thrift stores, salvage shops, yard sales, Marketplace, and free finds.

SEARCH LIKE A SET DESIGNER: how to see hidden uses and use better search language.

DISPLAY ENGINEERING: measurements, balance, hardware, and protection made visual.

Comments are not applause. They are market research wearing casual clothes.

Answer useful questions. Turn strong ones into response videos. Record repeated product requests.

Ask viewers what they would choose. Invite them to submit finished projects. One repeated question becomes a post. Ten may become a guide. A recurring sourcing or fit problem may become a product.

Track saves, clicks, signups, purchases, returns, questions, and completed projects. Views tell you who passed by. Actions tell you who cared.

CHAPTER 4

Make Every Project Shoppable -
Without Making It Gross

Organize the Shop Around the Job

People do not wake up desperate to browse “oddities supplies.” They are trying to complete a job. They need to prepare, support, attach, finish, display, photograph, store, or ship something.

Organize the product catalog around those jobs:

- preparation, cleaning, protection, and care;
- substrates, bases, frames, and creative surfaces;
- mounts, rods, stands, supports, and mounting inserts;
- domes, cases, cabinets, and glass enclosures;
- adhesives, fasteners, finishes, and lighting;
- photography and filming equipment;
- labels, provenance records, storage, and packing materials.

The strange secondhand object stays the creative hero.

Repeatable revenue usually comes from the supporting cast: repair tools, finishes, fasteners, lighting, mounting hardware, enclosures, protective materials, and packing supplies.

Build the first library around approximately 50 verified products tied to real jobs. Each record should include the source, price, dimensions, usable clearance, interface size, material, load, adjustability, shipping risk, alternatives, and what actual use revealed.

Compatibility Is the Real Product

Compatibility is where BonesAndHoes can become far more useful than ordinary search. A dome can look perfect online and still be too small inside. A base can steal the expected clearance. A rod may not fit the interface. A stand may fail under the load.

Record the details that decide success, not merely the ones that looked lovely in a product photograph.

Give people options.

A project page can show budget and premium routes, multiple sizes, upgrades, and different aesthetics. The goal is to help them make their own work—not produce a tiny army of identical projects.

Start digital

Digital because digital is cheap to test and does not demand a spare room full of boxes. Early offers can include the free 50-state legal-navigation guide, a free project-planning or compatibility worksheet, paid preparation and display-planning guides, a secondhand-sourcing and search-vocabulary guide, and a creator-operator toolkit for interviews, permissions, pricing, and supplier records.

Deliver the digital products through Payhip and list qualifying offers on Etsy. These products can earn revenue immediately, but their larger value is diagnostic: they tell you what people will exchange money for before you touch physical inventory.

CHAPTER 5

Build the Community Hub - Because Followers Are Not a Community

Followers Become a Community When They Can Contribute

The Community Hub is not a cute bonus tab. It is the center of the long-term business: the place where temporary viewers become participants, individual knowledge becomes shared intelligence, and demand stops being a guessing game.

Build it into the BonesAndHoes website as a moderated member community with clear spaces:

- The Hunt: sourcing regions, search techniques, thrift routes, salvage, Marketplace, estate sales, and lawful opportunities;
- Preparation and Care: methods, safety, products, storage, and troubleshooting;
- Art and Substrates: works in progress, creative directions, bases, frames, surfaces, and finishes;
- Mounts, Stands, and Displays: measurements, compatibility, enclosures, hardware, and display failures;
- Products That Worked: member experience with tools, suppliers, packing, and alternatives;
- Creator Showcase: permission-based finished work and member profiles;
- State and Local Questions: routes to current agencies and verified resources;
- Expo and Events: meetups, vendor discoveries, interviews, workshops, and field reports;
- Collaboration Board: sourcing trips, project swaps, interviews, Lives, and shared projects;
- Help Me Solve This: practical problems the community and BonesAndHoes can investigate together.

Share regions. Protect exact locations.

Add member profiles, searchable project threads, moderated product discussions, and a community map showing general regions—not precise sensitive locations. Never expose private-property access, protected sites, vulnerable wildlife locations, or any place where attention could create a legal, ethical, or conservation problem. We are building a business, not publishing a treasure map for chaos goblins.

The Hub is the listening system. Repeated questions become content. Product discussions reveal affiliate opportunities. Finished projects become permission-based features. Recurring failures expose guides or products the market needs. Active members become collaborators, ambassadors, event contacts, and trusted local sources.

The loop is powerful:

Content attracts people → the Community Hub keeps them involved → their conversations reveal demand → BonesAndHoes creates better resources, recommendations, collaborations, and products → those results bring more people back.

Relationships Grow When You Create Value First

The wider network works the same way. It is not a list of people to bother when you need reach. It is a system for creating value together.

Five people. One specific idea.

Approach five relevant people at a time with a specific idea. Start with what you genuinely admire. Explain the proposed feature, where it will appear, how permission and credit will work, and what the creator receives afterward.

Useful collaborations include:

- joint thrift, salvage, or sourcing trips;
- studio visits and creator spotlights;
- “one find, two artists” projects;
- project swaps;
- supplier demonstrations;
- display or packing challenges;
- Instagram Lives and YouTube interviews;
- creator reactions and shared resource guides.

The opening queue already exists.

The research has already identified 61 curated creators, suppliers, organizations, and connector nodes, with 25 ranked for first outreach. Use that directory as the opening queue. Track contact status, permissions, feature ideas, follow-up, introductions, and the value you return.

Permission first. Credit loudly.

Permission comes before reposting. Attribution does not replace consent. Credit the creator prominently, link her pages and products, send her the finished feature, return useful audience feedback, and then ask the most valuable networking question in the world: Who else should we meet?

That is how one creator leads to a supplier, the supplier leads to a manufacturer, several people expose the same limitation, and the limitation becomes content, a guide, or a future product.

By Day 60, complete at least two meaningful creator or vendor features. Cross-promotion is nice. Friendships, collaborators, trusted sources, and a distributed learning network are better.

CHAPTER 6

Turn the Expo into a Market Laboratory

The Expo Is a Market Laboratory

The Expo is not one recap video. It is an entire content season and a live market-research floor with better outfits.

BEFORE / DURING / AFTER

Before the event, publish vendor previews and “who we want to meet” content. Arrange interviews. Study the ranked targets. Prepare questions. During the event, capture discoveries, demonstrations, customer questions, booth presentation, pricing, and the products people repeatedly pick up. Afterward, publish approved interviews, product lessons, creator spotlights, and a “what the market is telling us” episode.

58 records. 48 verified current vendors. One live floor full of business models.

The vendor census contains 58 records, including 48 verified current vendors, plus instructors, organizers, partners, and carefully labeled leads. Public evidence already shows how businesses in this space earn: wholesale and stockist relationships, workshops paired with products, timed releases, paid services, shared-booth distribution, and collective or touring-store models.

Ask questions that expose opportunity:

- What is hardest for customers to source?
 - Which size or component is always missing?
 - What breaks, ships badly, or takes too long?
 - What do customers misunderstand?
 - What workaround have you invented?
- What do people buy repeatedly?
Who else should we interview?

A vendor’s workaround can become a teaching video. A recurring transit failure can become a packing guide. A missing size mentioned at several booths can become a product brief. Expo interviews are content, relationship building, supplier research, and product development occurring at the same time. Efficient, yes. Accidental, no.

CHAPTER 7

Here Is Where the Money Comes From

WHERE & HOW TO SELL:

The Growth Map for Anna & Haley

Here Is Where the Money Comes From

The revenue path should be visible from the beginning. If the commercial plan remains a mysterious cloud of “someday we’ll monetize,” someday will remain remarkably well funded with zero dollars.

01

FREE ♦ EMAIL

First: free resources and email ownership. Use a useful guide or worksheet to turn a viewer into a subscriber. Social platforms introduce you; the website, Community Hub, and email list preserve the relationship.

02

PAID DIGITAL

Second: paid digital resources. Sell focused guides through Payhip and qualifying Etsy listings. They require no physical inventory, can carry strong margins, and reveal which problems people will actually pay to solve.

03

AFFILIATE

Third: affiliate recommendations. Apply to relevant retailer, manufacturer, and supplier programs. Link products only when a project, comparison, or real recommendation supports them. Add TikTok Shop creator-affiliate products when the account is eligible and the products belong in the content.

04

CURATED COMMERCE

Fourth: curated commerce. Add a low-fixed-cost owned checkout only when demand gives it a clear job. Square Free can serve as an early bridge. Shopify comes later—when catalog management, supplier connections, synchronization, or multichannel capability justify another monthly bill.

05

SUPPLIER-DIRECT ♦ OWNED

Fifth: supplier-direct and owned products. Add authorized supplier-direct offers only when fulfillment, returns, margins, and responsibility are clear. Develop owned products only after repeated demand proves the gap.

Keep the Transaction Honest

Use each channel for the job it can honestly do.

Use Etsy for offers that actually belong on Etsy: qualifying digital, original, or handmade products. Do not turn it into a random shelf of ordinary resold supplies. Use TikTok Shop with equal discipline. Creator affiliate can begin when eligible. TikTok Seller waits until inventory ownership, fulfillment, returns, and customer support are proven.

A curated path is not a single shipped kit.

Keep the transaction honest. A project page may recommend products from several sellers, with each seller shipping its own item. That is a curated shopping path—not one “kit.” A single shipped kit requires one responsible operation controlling inventory, packaging, instructions, delivery, quality, and returns. Names matter when customers are understandably expecting their money to produce a specific reality.

Short-form discovery → long-form trust → exact project page → free guide and email → paid resource or product link → repeat project → later owned product.

THE MODEL

That is the model. Content earns attention. Education earns trust. The website organizes intent. Links and digital products create early revenue. The Community Hub exposes demand. Repeated demand tells you what deserves to become a product.

CHAPTER 8

Protect the Money and Earn the Right to Manufacture

Revenue Is Not the Money You Keep

Revenue is the sale. Contribution is what remains after direct costs. Confusing the two is how very busy businesses become very broke businesses.

\$12 DIGITAL GUIDE
≈ \$10.75 retained
before taxes

\$65 SUPPLIER-DIRECT ORDER
≈ \$13 contribution
after modeled direct costs

In one research model, a \$12 digital guide retained roughly \$10.75 before taxes. A \$65 supplier-direct order contributed only about \$13 after modeled direct costs. These are illustrations, not forecasts, but the lesson is beautifully unromantic: a thin reseller discount can create activity without creating a healthy company.

Use practical gates:

- reject a supplier-direct offer that models below 15 percent contribution before owner labor;
- target at least 20 percent contribution on a standardized physical offer;
- seek roughly 30 percent on a later difficult-to-find owned product;
- require every paid platform to earn its cost through conversion, saved labor, or genuinely new capability.

Watch the evidence, not the excitement.

Watch clicks, transactions, contribution, signups, repeated questions, independently converting product families, supplier reliability, creator introductions, returns, and breakage. A modest product that fits reliably can be more valuable than a popular one that creates confusion, damage, and a customer-service migraine.

Demand Must Earn the Right to Manufacture

The strongest later owned-product hypotheses are already visible:

- difficult-to-find small-specimen stands;
- adaptable mounts, rods, and mounting inserts;
- bases and display hardware;
- correctly sized enclosures and cabinets;
- provenance and care systems;
- protective packing systems.

DO NOT MANUFACTURE THEM YET.

Do not manufacture them yet. A concept earns development only after the problem repeats across projects, audience behavior, creator or vendor interviews, and supplier conversations. Before committing, require at least 20 interviews, independent confirmation of the same need, supplier quotes, testable instructions, workable channel economics, and evidence collected over time.

That is not hesitation. That is how you bootstrap without setting cash on fire for atmosphere.

CHAPTER 9

The First 90 Days: Do This in Order

Days 1–30: Build the Loop, Not the Illusion

Days 1–7: Build the foundation

- Buy the domain and launch the basic mobile-first website.
- Open Payhip and establish the email list.
- Clean up TikTok and Instagram, and establish YouTube properly.
- Create reusable project-page and YouTube-description templates.
- Choose the first complete project.
- Apply for appropriate affiliate programs.
- Contact the first five creators or vendors.

One week. Not perfection. A working foundation. Nobody has ever received a trophy because her coming-soon page had exquisite kerning.

Days 8–30: Publish the first complete cycle

- Release the first long-form YouTube project.
- Produce at least ten platform-adapted short pieces from it.
- Publish one free guide and one paid digital resource.
- Build the first 50-product, job-linked library.
- Add links, credits, disclosures, and email capture to every destination.
- Complete one permission-cleared creator feature.
- Target approximately 100 meaningful outbound product clicks.

The objective is not merely to post. It is to complete the entire loop from discovery to destination to measurable action.

Days 31–90: Let the Evidence Choose

Days 31–60: Prove offers and relationships

- Publish the second complete project and its content stack.
- Add qualifying Etsy listings.
- Activate TikTok Shop creator affiliate when eligible.
- Complete two creator or vendor features and one collaboration.
- Publish a Treasure Routes sourcing episode and one honest failure lesson.
- Reach at least ten attributed transactions.
- Identify three product families attracting interest independently.
- Earn at least two warm introductions and useful supplier responses.

At this stage, stop grading success by vibes. You are looking for repeat behavior: people clicking, buying, asking related questions, finishing projects, and returning.

Days 61–90: Choose what deserves expansion

- Complete 20 structured creator, vendor, supplier, or audience interviews.
- Rank supplier-direct candidates by margin, quality, fulfillment, returns, and responsiveness.
- Decide whether an owned checkout has earned a role.
- Confirm three independently converting product families.
- Select no more than two physical-product gaps for deeper testing.
- Build the next quarter around what actually converted.

The 90-day goal is not fame. It is a functioning system: an owned hub, an email list, long- and short-form content, shoppable projects, digital products, affiliate infrastructure, active relationships, and evidence showing what deserves investment.

That is a business foundation. A viral video is a nice Tuesday.

CHAPTER 10

The One-Year Expansion Path

The One-Year Expansion Path

QUARTER 4 — Scale Selectively
(Months 10–12)

Reinvest revenue into proven opportunities and test the first owned-product prototypes.

Y1

THE YEAR-ONE DESTINATION

Achieve a recognizable identity, a working creator network, and evidence-backed Year Two direction.

QUARTER 3 — Expand the Network and Catalog (Months 7–9)

Conduct Expo interviews and negotiate stronger supplier relationships based on proven demand.

Revenue Offer Ladder	
Late Stage 	Offer Type: Authorized Supplier-Direct Goal: Owned Relationship (Low Risk)
Mid Stage 	Offer Type: Affiliate Recommendations Goal: Demand Sensing (No Inventory)
Early Stage 	Offer Type: Free & Low-Cost Digital Goal: Trust & Email Eapture

QUARTER 2 — Turn Winners into Systems (Months 4–6)

Organize a curated shop library and establish a consistent email and follow-up rhythm.

QUARTER 1 — Prove the Foundation (Months 1–3)

Establish the content cycle, publish first resources, and track 90 days of evidence.

Expand Only What Earns It

Months four through twelve are for earned expansion.

Repeat the project-content-commerce cycle. Strengthen the suppliers who respond well. Turn the Expo into a recurring editorial season. Grow the creator network through introductions. Expand the digital resources people actually use. Add an owned checkout only when the current path needs it. Prototype one physical product at a time.

By the end of the first year, look beyond follower count and gross revenue. The stronger signs are:

- the audience trusts your recommendations and completes projects;
- YouTube, TikTok, Instagram, Pinterest, email, and the website operate as one system;
- long-form projects reliably produce useful short-form content;
- several product families convert without depending on one viral post;
- creators and vendors participate, share, and introduce others;
- digital products and recommendations earn revenue without large inventory risk;
- one or two physical-product ideas have earned serious testing;
- your working records make sourcing, compatibility, and recommendations easier over time.

Listen, ladies: you are not inventing a business and forcing it into your friendship. The friendship, the hunt, the art, and your willingness to learn in public are the engine. The website, content platforms, Community Hub, links, products, and partnerships are how that engine becomes a company.

START WITH ONE REAL THING.

So start with one real thing. Tell the complete story. Help people act. Connect them to what they need. Record what happens.

Then do it again—smarter, louder, and with receipts.
